Course curriculum for Mechanical Engineering -2019 Batch

	Semester VII (2019 Batch)				
S. No	Course code	Course name	Instructor		
1	ME 413	Applied Inermodynamics Laboratory	Prof. Hiranya Deka Prof. Surya Prakash		
3	ME 313	K inemancs and Dynamics of Machinery	Prof. Sangamesh Deepak R Prof. Tejas Prakash Gotkhindi		
4	ME 314	ricat Transici Laboratory	Prof. Sudheer Siddapureddy Prof. Dhiraj Patil		
5	ME 411	Manufacturing Processes Lab	Prof. Somashekara M A Prof. Satyapriya Gupta Prof. Sarvesh		
6		Elective II			
7		Elective III			
8		Elective IV /BTP(Prof. Rakesh Lingam)			

Electives for ME VII Semester

S. No	Department	Course code	Course name	Instructor	Pre-requisite(s)
1		CS 601	Software development for Scientific Computing	Prof. Nikhil Hegde	Exposure to Data Structures and Algorithms, C / C++/ Java / Matlab
2		CS 603	Approximation Algorithms	Prof. Sandeep R B	Data Structures and Algorithms (CS201) & Exposure to Design and analysis of algorithms (CS 205)
3	CSE	CS 423	Advanced Topics in Embedded Systems	Prof. Gayathri Ananthanarayanan	CS 301 (Computer Architecture). Exposure to Operating Systems is preferred.
4		CS 305	Software Engineering	Prof. Raghu Hudli	Data structures and algorithms, Programming in C,C++ and Java.
5		CS 433	Cloud Software Development	Prof. Rajshekar K.	<u>Desirable</u> : Exposure on Operating System, Database, Cloud Programming language (Java, .Net, NodeJS, HTML/CSS, etc.)
6		CS 402	Distributed Systems	Prof. Kedar Khandeparkar	Operating Systems, Data Structuresand Algorithms, Programming in C++

				1	
7		EE 327	Digital Communication and coding theory	Prof. Naveen M B	Signals and Systems, Introduction to Communication Systems, Introduction to Probability
8		EE 403	Power system dynamics and control	Prof. Pratyasa Bhui	Power System, Electrical Machines
9	Electrical	EE 433	Next Generation Wireless Systems / Wireless Networks	Prof. Rahul J Pandya	Principles/Fundamentals of Communications
10			recworks	Ton Kunur Tunuyu	
		EE 406	Speech Processing	Prof. Samudra Vijaya K	Exposure to probability concepts
11		EE 405	Pattern Recognition and Machine Learning (PRML)	Prof. S. R. Mahadeva Prasanna	Exposure to basic concepts in calculus and probability
12		EE 323	Analog Circuits	Prof. Naveen Kadayinti	Analog Circuits
13		ME 421	Turbomachines	Prof. Sudheer Siddapureddy Prof. Dhiraj Patil	Fluid Mechanics; Thermodynamics
14		ME 412	Energy and Environment Lab	Prof. Dhiraj Patil Prof. Sudheer Siddapureddy	-
15	Mechanical	ME 505	Advanced Solid Mechanics	Prof. Tejas Gotkhindi	-
16		ME 507	Advanced Mechanisms and Dynamics of Mechanical Systems	Prof. Sangamesh Deepak R	-
17		ME 509	Advanced Fluid Mechanics and Heat Transfer	Prof. Dhiraj Patil	Fluid Mechanics and Heat Transfer
18		ME 501	Additive and Forming Manufacturing Processes	Prof. Somashekara M A Prof. Rakesh Lingam	-
19		CH 405	Our health and medicine	Prof. Nilkamal Mahanta	None
20	Chemistry	CH 305	Introduction to sophisticated Characterization techniques	Prof. Rajeswara Rao M, Prof. Tejas Gotkhindi Prof. Ruma Ghosh	None
21		CH 403	Quantum Field Theory	Prof. B L Tembe	Exposure to Physics, Chemistry and Mathematics
22		HS 301	Philosophy	Prof. JollyThomos	Nil
23		HS 321	Energy Economics and Policy	Prof. Gopal Sharan Parashari	None
24		HS 304	Intellectual Property Management	Prof. R.R. Hirwani	Nil
25	Hee	HS 405	Innovation and Social Entrepreneurship	Prof. R.R. Hirwani	Nil
26	HSS	HS 403	Happiness and Well-being	Prof. B L Tembe	Nil

27	'	MA 403	Introduction to Number Theory	Prof. N S N Sastry	None
	Mathematics	Ĺ			
28	,	MA 501	Measure Theory	Prof. Dhirithi Ranjan Dolai	Real Analysis
29	<u> </u>	MA 405	Functional Analysis	Prof. Dhirithi Ranjan Dolai	Basic topological concepts, Metric spaces, Measure theory
30			+	+	
	Physics	PH 201	Electrodynamics	Prof. Kavita Devi	PH 102
31		PH 402	Astrophysics	Prof. D. Narasimha	Successfully finishing first 3 semesters
32		PH 404	Introduction to Quantum Information and Quantum Computation	Prof. R. Prabhu	PH101 – Quantum Physics and Application MA102 - Linear Algebra

Electives Syllabus

CSE Department
Name of Academic Unit: Computer Science and Engineering

Level: B. Tech./MS **Programme:** B.Tech./MS

Togra	amme: B.Tech./MS	
i	Title of the course	CS 601 Software Development for Scientific Computing
ii	Credit Structure (L-T-P-C)	3-0-0-6
iii	Type of Course	Elective
iv	Semester in which normally to be offered	Autumn
V	Whether full or half semester course	Full
vi	Pre-requisite(s), if any(for the students) – specify course number(s)	Exposure to Data Structures and Algorithms, C / C++ / Java / Matlab
vii	Course content	Algorithmic Patterns in Scientific Computing: dense and sparse linear algebra, structured and unstructured grid methods, particle methods (N-body, Particle-Particle, Particle-in-cell, Particle-in-a-mesh), Fast Fourier Transforms, Implementing PDEs, C++ standard template library (STL), Introduction to debugging using GDB, GMake, Doxygen, Version Control System, Profiling and Optimization, asymptotic analysis and algorithmic complexity. Mixed-language programming using C, Fortran, Matlab, and Python, Performance analysis and high-performance code, Data localityand auto tuning, Introduction to the parallel programming world.
viii	Texts/References	 Stroustrup C++ Language Reference (https://www.stroustrup.com/4th.html) Suely Oliveira, David Steward: Writing Scientific Software: AGuide to Good Style. Cambridge University Press, 2006 Web references to GNU Make, GDB, Git, GProf, Gcov. Code Complete: A Practical Handbook of Software Construction https://www2.eecs.berkeley.edu/Pubs/TechRpts/2006/EECS-2006-183.html
ix	Name (s) of the instructor (s)	Nikhil Hegde
X	Name (s) of other departments / Academic Units to whom the course is relevant	EE, ME
xi	Is/Are there any course(s) in the same/other academic unit(s) which is/ are equivalent to this course? If so, please give details.	No
xii	Justification/ Need for	Creating software in Computational Science and Engineering requires

introducing the course	skills and tools from many disciplines. This course focuses on how
	the skills and tools are applied towards larger software development
	goals in the context of dominant algorithmic patterns or <i>motifs</i> found
	in scientificcomputing. The aim of the course is to provide
	knowledge on how advanced numerical methods and complex
	algorithms in Scientific Computing can be implemented using C++
	to engineer larger systems through software development principles
	of refactoring, composition, correctness and performance analysis,
	and debugging. The course initiates students into CS305: Software
	engineering, a rigorous study of software development principles.
	Also, the course provides a base for subsequent parallelization
	optimizations, which is the subject of CS410: Parallel Computing
	that focuses on parallelizing scientific code (often)
	using different parallel programming paradigms.

4	Recommended ^{\$} prior exposure specify course code(s) or background / knowledge / skills %	Design and analysis of algorithms (CS205)		
5	Course content	Introduction, approximation schemes, design and analysis of approximation algorithms - combinatorial algorithms, linear programming based algorithms. Hardness of approximation.		
6	Texts/References (Minimum 2/3)	Textbook: (1) Approximation algorithms. Vazirani, Vijay V. Berlin: springer, 2001. Reference: (1) The design of approximation algorithms. Williamson, David P., andDavid B. Shmoys. Cambridge university press, 2011.		

7	Need for introducing the course	Many of the real world problems are NP-hard. This implies that there exist no algorithms running in polynomial-time to solve such problems, unless P = NP. Approximation algorithms provide a way to tame such problems by running in polynomial-time and obtaining near-optimal solutions with provable guarantees. This course is relevant not only for students in theoretical computer science but also for those who work with
		computational problems in other domains.

Name of Academic Unit: Computer Science Level: B.Tech./MS/PhD

Level: B.Tech./MS/PhD Program: B.Tech./MS/PhD

i	Title of the course	CS 433 Cloud Software Development
ii	Credit Structure (L-T-P-C)	1.5-0-0-3
iii	Type of Course	Elective
iv	Semester in which normally to beoffered	Autumn
V	Whether Full or Half Semester Course	Half
vi	Pre-requisite(s), if any (For the students) – specify course number(s)	<u>Desirable</u> : Exposure on Operating System, Database, CloudProgramming language (Java, .Net, NodeJS, HTML/CSS, etc.)
vii	Course Content	Module 1 - Introduction to Cloud Computing Landscape
		Understand how industries rely on the cloud computing global infrastructure, Identify the applications and use cases
		• Identify the principles and characteristics of Cloud Computing - IaaS, PaaS, SaaS
		Validate the different patterns of cloud computing adoption including public cloud services, private and hybrid approaches
		Identify common challenges associated with the adoption of cloud computing solutions and associated myths
		Compare and contrast with on-premise/traditional versus cloud
		Understand in-country data regulations, data sovereignty considerations
		Module 2 - Cloud Computing Technology
		Understand Virtualization Concepts - data, compute, network, operating system, HCI
		Understand Cloud Infrastructure -Backup, Restore, Migration, DC/DR, HA use cases
		Understand Programming concepts Cloud-native apps, Serverless, Containers
		Learn Containers— Kubernetes, Docker, containers
		Module 3 - Using Managed Cloud Services

		• Learn 12-factor Application Architecture, api, Microservices, databases - sql, no-sql, object store
		Application and Microservice Security- OAuth, access tokens
		Understand Autoscale - horizontal and vertical scaling, logging and monitoring aspects of apps and infrastructure
		Learning DevOps frameworks - toolchains, ci/cd, blue/green deployment, canary deployment
		Module 4 - Case Studies - Public Cloud Provider – aws, azure, ibmcloud
viii	Texts/References	Text Books: - Thomas Erl, Zaigham Mahmood, Ricardo Puttini, "Cloud Computing Concepts, Technology & Architecture", Pearson, 2013.

X	Name(s) of other Departments/ Academic Units to whom the courseis relevant	EE
xi	Is/Are there any course(s) in the same/ other academic unit(s) whichis/ are equivalent to this course? If so, please give details.	No
xii	Justification/ Need for introducing the course	The course aims at preparing the students for the next technology frontier - Cloud computing. While the field is vast, this course prepares students in core cloud concepts, architectures, programming languages, frameworks, deployments, etc., with

/

	hands-on labs. The course will act as a foundation for further research
	or certification. Many Public Cloud vendors offer free students access
	to get hands-on experience on what they learn in thecourse. Students
	will complete few labs using those Public Cloud platforms.

Name of the Academic Unit: Computer Science & Engineering

Level: B.Tech.
Programme: B.Tech.

i	Title of the course	CS 402 Distributed Systems
ii	Credit Structure (L-T-P-C)	3-0-0-6
iii	Type of Course	Elective
iv	Semester in which normally to be offered	VII
V	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s), if any (For the students) – specify course number(s)	Operating Systems, Data Structures and Algorithms, Programming in C++
vii	Course Content	 Introduction to distributed systems, Message Passing, Leader Election, Distributed Models, Causality and Logical Time
		Logical Time, Global State & Snapshot and Distributed Mutual Exclusion-Non- Token and Quorum based approaches
		 Distributed Mutual Exclusion-Token based approaches, Consensus & Agreement, Checkpointing & Rollback Recovery
		Deadlock Detection, DSM and Distributed MST
		Termination Detection, Message Ordering & Group Communication, Fault Tolerance and Self-Stabilization, Gossip Style communication, chord, pastry
		• Concurrency and Replication Control, RPCs, Transactions
		Distributed Randomized Algorithms, DHT and P2P Computing
		Case Studies: GFS, HDFS, Map Reduce and Spark

viii	Texts/References	 Distributed Computing: Principles, Algorithms, and Systems- Ajay D. Kshemkalyani and Mukesh Singhal
		 Distributed Computing: Fundamentals, Simulations and Advanced Topics-Hagit Attiya and Jennifer Welch
		3. Distributed Algorithms-Nancy Lynch
		4. Elements of Distributed Computing-Vijay
		K. Garg5. Advanced Concepts in Operating Systems-Mukesh Singhal, Niranjan G. Shivaratri
ix	Name(s) of Instructor(s)	Dr. Kedar Khandeparkar
X	Name(s) of other Departments/ Academic Units to whom the course is relevant	
xi	Is/Are there any course(s) in the same/ other academic unit(s) which is/ are equivalent to this course? If so, please give details.	No
xii	Justification/ Need for introducing the course	Technologies such as Hadoop, Cassandra, Spark, etc., that have emerged in the recent times are mainly based on the principles of distributed systems. This course aims to develop an in-depth understanding of the various distributed algorithms and discuss some use cases.

EE Department

Name of Academic Unit: Electrical

EngineeringLevel: B. Tech. Programme: B.Tech.

. –	ramme: B.Tech.	EE 444 DI 1/1 I I I I I I I I I I I I I I I I I
1	Title of the course	EE 323 Digital Communication and Coding
••		Theory
ii 	Credit Structure (L-T-P-C)	2-0-2-6
iii	Type of Course	Elective
iv	Semester in which normally to be offered	Autumn
V	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s), if any (For the students) – specify course number(s)	Signals and Systems, Introduction to Communication Systems, Introduction to Probability.
vii	Course Content	Digital Modulation - Signal constellations, Nyquist's Sampling Theorem and Criterion for ISI Avoidance, Linear modulation Optimal Demodulation - Review of Hypothesis Testing, ML and MAP decision rules, Signal Space Concepts, Optimal Reception in AWGN and performance analysis of various modulation schemes. Source Coding - Entropy, Shannon's source coding theorem (without proof), Huffman Codes Channel Coding - Mutual information, Shannon's channel coding theorem (without proof), Linear codes, soft decisions and introduction to cyclic codes
		Lab Component:
		Practical experiments in-line with the content of "Digital Communication and Coding Theory" course covering transmission and reception mechanisms corresponding to digital communication. • Digital modulation and demodulation – PSK and QAM
		Channel Modelling
		 Performance analysis of Huffmancoding Performance Analysis of linear and cyclic codes

viii	Texts/References	 Upamanyu Madhow, "Introduction to Communication Systems," Cambridge university press, 2008 edition. Cover and Thomas, "Elements of Information Theory," Wiley India Pvt. Ltd., 2006.

xi	Is/Are there any course(s) in the same/other academic unit(s) which is/ are equivalent to this course? If so, pleasegive details.	No
xii	Justification/ Need for introducing the course	The current and next generation wireless communication technologies use digital communication. The underlying procedures inthese systems mainly involve digital modulation and source coding and channel coding. This course enables the student to understand the basic principles behind these topics. The lab component provides a hands-on experience of various topics covered in the theory course. Together, they will enable the student to have a strong background of the basics of digital communication.

ix	Name(s) of Instructor(s) ***	S R Mahadeva Prasanna
X	Name(s) of other Departments/Academic Units to whom the course is relevant	CS
xii	Justification/ Need for introducing the course	This course aims at providing an overview to the speech processing area. Speech processing being an application area of probability, signal processing and pattern recognition, the same will be suitable for both electrical engineering and computer science and engineering students. The course contents include introduction to speech processing, speech signal processing methods like short term Fourier transform, Cepstral analysis, linear prediction analysis, sinusoidal analysis. Some of the applications like speech recognition and speech synthesis will also be taught.

Name of Academic Unit: Electrical Engineering

Level: PG/UG

Programme: B. Tech/MS/PhD

i.	Title of the Course	Pattern Recognition and Machine Learning (PRML)
ii.	Credit Structure	L T P C 3 0 0 6
iii.	Prerequisite, if any	Exposure to basic concepts in calculus and probability
	Course Content (separate sheet may be	Overview of Probability Theory, Linear Algebra, Convex Optimization. Introduction: History of pattern recognition & machine learning, distinction infocus of pattern recognition and machine learning.
iv.	used, if necessary)	Regression: Linear Regression, Multivariate Regression, Logistic Regression. Clustering: Partitional Clustering, Hierarchical Clustering, Birch Algorithm CURE Algorithm, Density-based Clustering
		PCA and LDA: Principal Component Analysis,
		Linear Discriminant Analysis.
		Kernel methods: Support vector machine Graphical Models: Gaussian mixture models and hidden Markov models Introduction to Bayesian Approach: Bayesian classification, Bayesian Learning, Bayes Optimal Classifier, Naive Bayes Classifier and Bayesian Network
v.	Texts/References (separate sheet may be used, if necessary)	 C. Bishop, "Pattern Recognition and Machine Learning," Springer, 2006. S. Theodoridis and K. Koutroumbas, "Pattern Recognition" Second Edn, Elsivier, 2003 B. Yegnanarayana, "Artificial Neural Networks", PHI, 1999. Simon Hayking, "Neural Networks and Learning
vi.	Instructor (s)	Machines",Pearson, 1999. S. R. Mahadeva Prasanna

vii.	Name of departments to whom the course is relevant	Computer Science and Engineering, Electrical Engineering and Mechanical Engineering
viii	Justification	Pattern Recognition and Machine Learning (PRML) has become an integral tool to solve real world challenges in many engineering fields. This course gives an exposure to topics in pattern recognition and machine learning.

Name of Academic Unit: Electrical Engineering Level: B. Tech

Programme: B. Tech.

xii	Justification/ Need for	This course is designed to spread awareness among
	introducing the course	students on the best practices to maintain a good health
		and to emphasize on the role of diet and nutrition. It will
		also encompass common diseases that we encounter
		often and various ways to prevent and mitigate them with
		the basic understanding of human physiology and
		medicinal chemistry. In the wake of this global COVID-
		19 pandemic, fundamental information on good health
		1
		and community medicine as well as healthcare
		system/policies has become indispensable. This course
		will provide the necessary foundation on the mechanism
		of various commonly used drugs, preventative medicine,
		and suitable family health practices which will facilitate
		one in making informed decisions on prevention,
		diagnosis, treatment, care, and support when required.

xii	Justification/ Need for introducing the course	The hands-on experience of various sophisticated instruments is vital and will enable students to understand the concepts learnt in the class. It will also motivate the students to pursue research in many areas of modern science and technology. This course provide the necessary skills required to handle and operate sophisticated instruments.

Name of Academic Unit: Chemistry Level: B.Tech.

i	Title of the course	CH 402 Quantum field theory
ii	Credit Structure (L-T-P-C)	2-1-0-6
iii	Type of Course	Elective course
iv	Semester in which normally to be offered	Autumn
V	Whether Full or Half Semester Course	Full
vi	Pre-requisite(s) , if any (For the students) – <i>specify course number(s)</i>	Exposure to Physics, Chemistry and Mathematics
vii	Course Content*	Introduction: Review of Classical Field Theories and the need for Quantum Field Theory Bosonic Fields: Second quantization of bosons; non-relativistic quantum fields and the Landau Ginzburg theory; relativistic free particles and the KleinGordon field; causality and the Klein-Gordon propagator; quantum electromagnetic fields and photons. Fermionic Fields: Second quantization of fermions; particle-hole formalism; Dirac equation and its nonrelativistic limit; quantum Dirac field; spinstatistics theorem; Dirac matrix techniques; Lorentz and discrete symmetries. Interacting Fields and Feynman Rules: Perturbation theory; correlation functions; Feynman diagrams; S-matrix and crosssections; Feynman rules for fermions; Feynman rules for QED. Functional Methods: Path integrals in quantum mechanics; "path" integrals for classical fields and functional quantization; functional quantization of QED; QFT and statistical mechanics; symmetries and conservation laws. Quantum Electrodynamics: Some elementary processes; radiative corrections; infrared and ultraviolet divergencies; renormalization of fields and of the electric charge; Ward identity. Renormalization Theory: Systematics of renormalization; integration out' and the Wilsonian renormalization; running' of the coupling constants and the renormalization group. Non-Abelian Gauge Theories: Non-abelian gauge symmetries; Yang-Mills theory; interactions of gauge bosons and Feynman rules; Fadde'ev-Popov ghosts and BRST; renormalization of the YM theories and the asymptotic freedom; the Standard Model.

х	Justification/ Need for introducing the course	Intellectual Property plays an important role in technological innovations, creation and growth of technology start-ups. The existing patent databases are repositories of global technical knowledge and can be used for problem identification, cross fertilization of ideas, generation of alternate solutions, technology monitoring, and competitive intelligence. It is felt necessary to sensitize the students to current IP regime and prepare them for the career in technology ventures.

Name of Academic Unit: HSS

Programme: B.Tech. / M.Tech. / Ph.D.: (Institutional Course)

i	Title of the course	Innovation and Social Entrepreneurship (Guided Study)
ii	Credit Structure (L-T-P-C)	(2 0 0 4)
iii	Type of Course	Elective course (Guided Study)
iv	Semester in which normally to be offered	Spring
V	Whether Full or Half Semester Course	Half (This is pilot course and later on based on experience gained, it will be expanded to full semester course with inclusion of Proof of Concept)
vi	Prerequisite(s), if any (For the students) – specify course number(s)	NIL
vii	Course Content*	The objective of this course is to apply advanced knowledge in science and technology to problems that are socially and economically relevant and to create and nurture social entrepreneurs. Students are expected to undertake a 6-8 weeks' project concerned with societal/rural issues. The main focus will be to enhance income and to improve the quality of lifeof the population at the bottom of the pyramid. Some illustrative examples are as follows: > Value added Agriculture > Waste to Wealth > Low cost housing > Affordable health care > Potable Water supply > Sustainable energy and energy efficiency > Environment protection and Sustainability Any other projects that address societal problems. • Students shall select a topic of social relevance and align with above objectives and study the problem in detail. • Students shall try to find out and evaluate solutions which are techno-commercially viable and have the potential to be scaled up to reach out to uplift the life of millions. • Develop a business model that will make it a sustainable social enterprise.
		➤ The course will involve self-study under guidance of instructor,

	few guest lectures by practitioners and/or visit to a social enterprise.
	> The students shall select the project in consultation with course instructor.
	➤ After carrying out the project, the student will submit a report and give a presentation highlighting the observations/results of the project and proposed business plan. This will be reviewed and graded.

course? If so,	
	There is a need to address social complex challenges by providing
_	innovative solutions at local and global levels, to modernize public local
	services, general interest services and community services often by
	involving users in the design, implementation and evaluation of these
	services and to <i>respond</i> in a more tailored, effective way to <i>people's</i>
	needs with a view to produce social change.
	New solutions to social challenges have to produce positive social impact and externalities (wellbeing of the users) and at the same time solutions have to be economically sustainable and involve entrepreneurial approach.
	Instructor(s) *** Name(s) of other Departments/ Academic Units towhom the course is relevant Is/Are there any course(s) in the same/other academic unit(s) which is/ are equivalent to this

		At IIT, Dharwad we wish to develop and deploy technological solutions to socially relevant problems of local and regional nature and promote social entrepreneurship amongst students who have to learn to think out of the box and to walk off the beaten track and be able to mobilize different human, organizational and financial resources and to work in partnership with other stakeholders and develop new governance models.
xiii	Other notes	It shall not be a mandatory requirement to live and work in the targeted areas, however, it will involve some field work to gather data and pilot work. Students can undertake above Social Innovation project either at IIT,
		Dharwad or any other Institute or Organization. In case the student wants to do the project in organization other than IIT, Dharwad, the permission of Dean, Academic Programme will be taken through the Course Instructor.
		The Institute / Organization where the project is to be undertaken shall provide all necessary infrastructural facilities and extend all possible helpand cooperation to facilitate the student to complete the project

vii	Course Content	ofh post Technological partial being partial additional additional partial p	In this course, we will explore the concept and different definitions ofhappiness and well-being, and the connection between happiness, positive attitude, relationships and the purpose and meaning of life. Techniques to achieve happiness in life will be studied. The course will be primarily participatory in nature with class discussions, presentations and journal assignments. The course material will be taken from a variety of sources. The causes that disturb the harmony inlife will be analysed and practices to address these satisfactorily will beinvestigated. The methods of yoga, pranayama different meditation paths and healing techniques will be evaluated so that each student can adopt a suitable combination to suit her needs. Assignments will be aimed at a better understanding of oneself and the society and the environment that we live in. Learning Objectives. After studying this course, the students will be able to: • Identify key psychological, social, cultural and biological factors inhappiness and well being • Understand the relationship between happiness, human connections, and qualities such as compassion, altruism, and gratitude • Describe the principles behind the specific activities that boosthappiness • Apply lessons from positive & social psychology to their personaland professional lives, enhancing their self-understanding • Practice research-tested techniques for enhancing happiness • Analyse human nature in terms of the three gunas and thepanchakosha model of beings. • Adopt methods of yoga and meditation for self-improvement				

Course Contents

Happiness and wellbeing: definitions and measurement. The Hedonictradition. Role of social connections in fostering happiness. Kindness and compassion, altruism and happiness, Success, money and happiness. Cooperation, reconciliation and happiness.

Mindfulness, attention and focus.

Mental habits of happiness: self-compassion, flow, and optimism. The Pursuit of Happiness: Does Being Good or Bad Produce More Happiness?

Understanding the Causes of "Suffering." Cultivating Right" Attention and "Right" Desire. Meaningful Relationships.

The strong links between gratitude and

happiness. Curiosity, Play, and

Creativity. The art of letting go.

Finding Your Happiness Fit and the New Frontiers.

Happiness and Meaning in Life

Yoga, Panchakoshas and Gunas: Guna concept: satwa, rajas and tamasand balancing the gunas.

Ashtanga Yoga: Yama, Niyama, Aasana and Pranayama Pratyahar, Dharana and Dhyana.

Vipassana Meditation and Reiki

Kindness and compassion, altruism and happiness, Success, moneyand happiness. Cooperation, reconciliation and happiness.

Mindfulness, attention and focus.

Mental habits of happiness: self-compassion, flow, and optimism.

viii	Justification/ Need for introducing the course	Astrophysics and Cosmology have a few fundamental unsolved problems. This course is an attempt to convey to the students that there are upcoming powerful astronomical facilities capable of solving some of them. But both at hardware and software level, it is Technology that drives what observations are feasible. India is one of the main contributors for development of some of the technologies.
