

# Engineering Physics

| Semester II |                   |  |   |   |   |           |
|-------------|-------------------|--|---|---|---|-----------|
| Sr No       | Course Code       | Course Name  | L | T | P | C         |
| 1           | MA 102            | <u>Linear Algebra</u>  | 3 | 1 | 0 | 4         |
| 2           | MA 103            | <u>Differential Equations -I</u>                                     | 3 | 1 | 0 | 4         |
| 3           | ME 111            | <u>Engineering Graphics Lab</u>                                      | 1 | 0 | 3 | 5         |
| 4           | EE 101            | <u>Introduction to Electrical Systems and Electronics</u>            | 3 | 0 | 0 | 6         |
| 5           | CS 201            | <u>Data Structures and Algorithms</u>                                | 3 | 0 | 0 | 6         |
| 6           | CS 211            | <u>Data Structures and Algorithms Laboratory</u>                     | 0 | 0 | 3 | 3         |
| 7           | ME 113            | <u>Hands on Engineering Laboratory</u>                               | 0 | 0 | 3 | 3         |
| 8           | PH 102            | <u>Electricity and Magnetism</u>                                     | 2 | 1 | 0 | 6         |
| 9           | NO 102/<br>NO 104 | National Sports Organization (NSO)/<br>National Service Scheme (NSS) |   |   |   | PP/<br>NP |
|             |                   | Total Credits  |   |   |   | 37        |

# Engineering Physics

|   |  |  |
|---|--|--|
| 1 | <b>Title of the course<br/>(L-T-P-C)</b> | <b>Linear Algebra<br/>(3-1-0-4)</b>  |
| 2 | <b>Pre-requisite<br/>courses(s)</b>      | --   |
| 3 | <b>Course content</b>                    | Vectors in $R^n$ , notion of linear independence and dependence, linear span of a set of vectors, vector subspaces of $R^n$ , basis of a vector subspace. Systems of linear equations, matrices and Gauss elimination, row space, null space, and column space, rank of a matrix. Determinants and rank of a matrix in terms of determinants. Abstract vector spaces, linear transformations, matrix of a linear transformation, change of basis and similarity, rank-nullity theorem. Inner product spaces, Gram-Schmidt process, orthonormal bases, projections and least squares approximation. Eigenvalues and eigenvectors, characteristic polynomials, eigenvalues of special matrices (orthogonal, unitary, hermitian, symmetric, skew-symmetric, normal). Algebraic and geometric multiplicity, diagonalization by similarity transformations, spectral theorem for real symmetric matrices, application to quadratic forms. |
| 4 | <b>Texts/References</b>                  | <ol style="list-style-type: none"><li>1. H. Anton, Elementary linear algebra with applications (8th Edition), John Wiley (1995).</li><li>2. G. Strang, Linear algebra and its applications (4th Edition), Thomson (2006)</li><li>3. S. Kumaresan, Linear algebra - A Geometric approach, Prentice Hall of India (2000)</li><li>4. E. Kreyszig, Advanced engineering mathematics (10th Edition), John Wiley (1999)</li></ol>  |

|   |  |   |
|---|--|---|
| 1 | <b>Title of the course<br/>(L-T-P-C)</b> | <b>Differential Equations -I<br/>(3-1-0-4)</b>  |
| 2 | <b>Pre-requisite<br/>courses(s)</b>      | Nil   |
| 3 | <b>Course content</b>                    | Exact equations, integrating factors and Bernoulli equations. Orthogonal trajectories. Lipschitz condition, Picard's theorem, examples on non-uniqueness. Linear differential equations generalities. Linear dependence and Wronskians. Dimensionality of space of solutions, Abel-Liouville formula. Linear ODEs with constant coefficients, the characteristic equations. Cauchy-Euler equations. Method of undetermined coefficients. Method of variation of parameters. Laplace transform generalities. Shifting theorems. Convolution theorem. |
