Engineering Physics

1	Title of the course (L-T-P-C)	Computer Architecture (3-0-0-6)
2	Pre-requisite courses(s)	--
3	Course content	The Language of Bits, Assembly Language, LogicGates, Registers, and Memories, Processor Design, Principles of Pipelining, The Memory System, Multiprocessor Systems, I/O and Storage Devices. Each concept will be first taught on the basis of the fundamental driving principles. Following this, real world examples (e.g., ARM processors) will be used to emphasize the content.

Engineering Physics

1	Title of the course (L-T-P-C)	Computer Architecture Laboratory (0-0-3-3)
2	Pre-requisite courses(s)	--
3	Course content	The lab will closely follow the theory course. The idea isto have the students develop a software model of a simple processor, capturing both functionality and timing aspects. They will implement modules as the concepts aretaught in class.
