

# Mechanical Engineering

## Semester III

<u>S.No</u>	<u>Course Code</u>	<u>Course Name</u>	<u>L</u>	<u>T</u>	<u>P</u>	<u>C</u>
1	EE101T	<u>Introduction to Electrical Systems and Electronics</u>	3	0	0	6
2	ME 203	<u>Fluid Mechanics</u>	3	0	0	6
3	ME205T	<u>Mechanics of Materials</u>	3	0	0	6
4	ME202T	<u>Engineering Materials</u>	3	0	0	6
5	ME212T	<u>ODEs and complex analysis</u>	0	0	3	6
6	ME202C	<u>Machine Drawing and 3D Modelling (New 5 Credit)</u>	0	0	0	5
7	ME201L	<u>Manufacturing processes and Metrology laboratory</u>	3	0	0	3
8	EE101T	<u>Introduction to Electrical Systems and Electronics</u>	3	0	0	6
		Total Credits				39

# Mechanical Engineering

1	<b>Title of the course</b> (L-T-P-C)	<b>Introduction to Electrical Systems and Electronics</b> <b>(3-0-1-7)</b>
2	<b>Pre-requisite courses(s)</b>	Exposure to Calculus
3	<b>Course content</b>	<p><b>From Physics to Electrical Engineering</b></p> <p>(a) Lumped matter discipline            (b) Batteries, resistors, current sources and basic laws            (c) I-V characteristics and modeling physical systems</p> <p><b>Basic Circuit Analysis Methods</b></p> <p>(a) KCL and KVL, voltage and current dividers            (b) Parallel and serial resistive circuits            (c) More complicated circuits            (d) Dependent sources, and the node method            (e) Superposition principle            (f) Thevenin and Norton method of solving linear circuits            (g) Circuits involving diode.</p> <p><b>Analysis of Non-linear Circuits</b></p> <p>(a) Toy example of non-linear circuit and its analysis            (b) Incremental analysis            (c) Introduction to MOSFET Amplifiers            (d) Large and small signal analysis of MOSFETs            (e) MOSFET as a switch</p> <p><b>Introduction to the Digital World</b></p> <p>(a) Voltage level and static discipline            (b) Boolean logic and combinational gates            (c) MOSFET devices and the S Model            (d) MOSFET as a switch; revisited            (e) The SR model of MOSFETs            (f) Non-linearities: A snapshot</p> <p><b>Capacitors and Inductors</b></p> <p>(a) Behavior of capacitors, inductors and its linearity            (b) Basic RC and RLC circuits            (c) Modeling MOSFET anomalies using capacitors            (d) RLC circuit and its analysis            (e) Sinusoidal steady state analysis            (f) Introduction to passive filters</p> <p><b>Operational Amplifier Abstraction</b></p> <p>(a) Introduction to Operational Amplifier            (b) Analysis of Operational amplifier circuits            (c) Op-Amp as active filters            (d) Introduction to active filter design</p> <p><b>Transformers and Motors</b></p> <p>(a) AC Power circuit analysis            (b) Polyphase circuits            (c) Introduction to transformers            (d) Introduction to motors</p>

# Mechanical Engineering

1	<b>Title of the course (L-T-P-C)</b>	<b>Fluid Mechanics (3-0-0-6)</b>
2	<b>Pre-requisite courses(s)</b>	Nil
3	<b>Course content</b>	<p>Introduction :Scope, definition of fluid as continuum, fluid properties.(2hr)</p> <p>Fluid Statics: Pressure at a point, basic equation for pressure field, pressure variation(fluid at rest):standard atmosphere, Measurement of pressure manometer,Hydrostatics force on a plane and curve surface, Buoyancy, flotation and stability, pressure variation in a fluid with rigid body motion linear motion, rigid body rotation(4hr)</p> <p>Elementary Fluid Dynamics: Statics, stagnation pressure, Bernoulli Equation assumptions(4hr)</p> <p>Fluid Kinematics The velocity field : Eulerian and Lagrangian flow descriptions, steady and deformation, Acceleration field: material derivative, unsteady and convective effects. Control volume and system representation : Reynolds' Transport Theorem, physical interpretation, steady, unsteady effects, moving control volume, potential function(6Hr)</p> <p>Integral approach Conservation of mass derivation of continuity, fixed, non-deforming control volume, moving non-deforming control volume, deforming control volume. Conservation of momentum: linear momentum and moment of momentum equation and their application., comparison of energy equation with Bernoulli's equation(6hr)</p> <p>Differential approach : linear motion and angular motion with deformation, Conservation of mass: differential form of continuity equation, stream function, Conservation of linear momentum, Inviscid flows, Irrotational flow(6hr)</p> <p>Viscous flow : Stress relationships,NS Equations, Simple solutions for viscous flows(4hr)</p> <p>Dimensional analysis Buckingham's II-theorem,Dimensionless groups &amp; their importance ( 3hr)</p> <p>Viscous Flow in Pipes : General characteristics of pipe flow, fully developed laminar and turbulent flow, turbulent shear stress, turbulent velocity profile, Pipe Flow rate measurement.(4hr)</p> <p style="padding-left: 40px;">Boundary layer: Boundary layer characteristics boundary layer structure and thickness on a plate, Blasius boundary layer, momentum integral boundary layer equation for a flat plate(4hr)</p>
4	<b>Texts/References</b>	<p>1.Yunus A. Cengel, John M. Cimbala, Fluid Mechanics, Tata McGraw Hill Education,2011</p> <p>2.F.M.White Fluid Mechanics, Seventh Edition, Tata McGraw Hill Education,2011,</p> <p>3.Kundu,Pijush K., and Ira M.Cohen.Fluid Mechanic, Elsevier,2001</p>

# Mechanical Engineering

1	<b>Title of the course (L-T-P-C)</b>	<b>Mechanics of Materials (2-1-0-6)</b>
2	<b>Pre-requisite courses(s)</b>	Nil
3	<b>Course content</b>	<p><b>Module 1:</b> Basics: Fundamentals of mechanics of deformable solids. Concepts of stress and strain and their relationships. Axially loaded members - Normal stress and strain, Simple (direct) shear stress and strain, Hooke's law, Stresses on inclined planes under axial loading, thermal stresses and strains, statically indeterminate problems. Elastic strain energy under axial loads.</p> <p><b>Module 2:</b> Torsion: torsion of circular cross-section shafts (Solid and hollow sections): Deformation field, Torsion formulae for stresses and angular deflection, Elastic strain energy under torsion, Closely-wound helical springs – stresses and deflections.</p> <p><b>Module 3:</b> Bending: Euler – Bernoulli model: normal and shear stresses, deflections for symmetric bending. Statically indeterminate problems, Elastic strain energy under flexure.</p> <p><b>Module 4:</b> Combined stresses: State of stress and strain at a point, transformation laws, Mohr's circle diagram for stress and principal stresses, thin walled structures: thin cylinders and spheres. Theories of failure: Maximum Normal-Stress theory, Maximum shear-stress theory and Maximum Distortional-energy theory.</p> <p><b>Module 5:</b> Energy methods – Castigliano's theorem and its applications, fictitious-load method. Stability of structures – Buckling of idealized and elastic columns</p>
4	<b>Texts/References</b>	<p><b>TEXTBOOKS:</b> 1) S.H Crandall, N.C Dahl and S.J Lardner, An Introduction to Mechanics of Solids, Tata McGraw Hill, Third Edition, 2012. 2) E.P. Popov, Engineering Mechanics of Solids, Prentice Hall of India, 2nd edition, 2012.</p> <p><b>REFERENCES:</b></p> <ol style="list-style-type: none"> <li>1. J. M. # Mechanical Engineering

1	<b>Title of the course (L-T-P-C)</b>	<b>Machine Drawing and 3D Modelling (1-0-2-3)</b>
2	<b>Pre-requisite courses(s)</b>	Exposure to Engineering Graphics Lab (ME 111)
3	<b>Course content</b>	<p><b>Introduction:</b> Engineering design process and drawings. Drawing standards. Computer aided drafting and use of software packages for engineering drawings</p> <p><b>Detachable Fasteners:</b> Screw threads: conventional representations and specifications; Threaded fasteners: Types, forms, standard, and specifications; Drawing of connections; Foundation bolts; Locking Devices: Classification, principles of operation, standard types and their proportions; Shaft Couplings: Common types, standard proportions for some couplings; Pipe Joints, common pipe connections</p> <p><b>Permanent Fastenings:</b> Rivets: Standard forms and proportions; Riveted Joints: Common types of joints, terminology, proportions and representation; Welds: Types of welds and welded joints, edge preparation, specifications, and representation of welds on drawings <b>Assembly Drawings:</b> withsectioning and bill of materials. Assemblies involving machine elements like shafts, couplings, bearing, pulleys, gears, belts, brackets. Engine mechanisms-assembly. Detailed part drawings from assembly drawings</p> <p><b>Tool Drawings:</b> Jigs and fixtures</p> <p><b>Production Drawings:</b> Limits, fits, and tolerances of size and form; Types and grade, use of tolerance tables and specification of tolerances, form and cumulative tolerances, tolerance dimensioning; Surface quality symbols, terminology and representation on drawings, correlation of tolerances and surface quality with manufacturing techniques</p> <p>3D Modelling exercise: use of Reverse Engineering to disassemble and measure components</p>

# Mechanical Engineering

1	<b>Title of the course (L-T-P-C)</b>	<b>ODEs and complex analysis 3-0-0-6</b>
2	<b>Pre-requisite courses(s)</b>	--
3	<b>Course content</b>	<ul style="list-style-type: none"> <li>• ODEs: Exact equations, integrating factors and Bernoulli equations. Orthogonal trajectories. Lipschitz condition, Picard's theorem, examples on non-uniqueness. Linear differential equations generalities. Linear dependence and Wronskians. Dimensionality of space of solutions, Abel-Liouville formula. Linear ODEs with constant coefficients, the characteristic equations. Cauchy-Euler equations. Method of undetermined coefficients. Method of variation of parameters. Review of power series and series solutions of ODEs. Legendre's equation and Legendre polynomials. Regular and irregular singular points, Extended Power Series Method: Frobenius Method, Bessel's equation and Bessel's functions. Basic Theory of Systems of ODEs, Wronskian, Systems of ODEs as Models in Engineering Applications.</li> <li>• Complex analysis: Definition and properties of analytic functions. Cauchy-Riemann equations, harmonic functions. Power series and their properties. Elementary functions. Cauchy's theorem and its applications. Taylor series and Laurent expansions. Residues and the Cauchy residue formula. Evaluation of improper integrals. Conformal mappings.</li> </ul>
